Dear Jammie:

Spectrum Environmental, Inc., (Spectrum) is pleased to provide this Phase I Environmental Site Assessment (Phase I ESA) Report prepared for the above-referenced property. The findings and conclusions of the Phase I ESA did not identify any Recognized Environmental Conditions (RECs) or Business Environmental Risks (BERs) in connection with the target property.

Please be aware that according to ASTM Practice E1527-13, this document is generally valid for 180 days, unless changes in site usage have occurred which would impact the environmental conditions of the property. If you have any questions or comments, please contact the undersigned at Spectrum Environmental, Inc. at (205) 664-2000.

Sincerely,

## 1.0 EXECUTIVE SUMMARY

Spectrum Environmental, Inc. (Spectrum) has prepared this Phase I Environmental Site Assessment (Phase I ESA) report for the undeveloped properties located at 6599 Seminole Circle, 6200 J Oliver Boulevard, 6600 J Oliver Boulevard, 6404 Kelco Place, 5651 Valley Road and 5625 Valley Road in Fairfield, Alabama in accordance with American Society of Testing and Materials (ASTM) Practice E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which is recognized by the United States Environmental Protection Agency (USEPA) and deemed to be compliant with the All Appropriate Inquiries (AAI) Regulation listed under 40 CFR Part 312.

The objective of this Phase I ESA was to identify, to the extent feasible *recognized environmental conditions*<sup>1</sup> (REC) and/or *business environmental risks*<sup>2</sup> (BER) in association with the property, if any. To accomplish this objective, Spectrum conducted a review of reasonably ascertainable<sup>3</sup> records (and practically reviewable<sup>4</sup>), conducted a site reconnaissance, conducted interviews of persons knowledgeable of the site/surrounding areas, and evaluated the data for reporting.

## 1.2 Conclusions

Spectrum has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-13 of the target property. A summary of the findings is presented below.

### ***Recognized Environmental Conditions***

A recognized environmental condition (REC), as defined in the ASTM Standard, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not REC's. *Based on our review of current and historical site data, no RECs were identified in connection with the target property.*

### ***Historical Recognized Environmental Conditions***

A historical recognized environmental condition (HREC), as defined in the ASTM Standard, is an environmental condition that in the past would have been identified as a REC, but has been adequately addressed and therefore no longer represents a REC. *Based on our review of current and historical site data, no HRECs were identified in connection with the target property.*

### ***Controlled Recognized Environmental Conditions***

A controlled recognized environmental condition (CREC), as defined in the ASTM Standard, is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). *Based on our review of current and historical site data, no CRECs were identified in connection with the target property.*

***Business Environmental Risks***

A business environmental risk (BER), as defined in the ASTM Standard, is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. *Based on our review of current and historical site data along with information collected during the site reconnaissance, no BERs were identified in connection with the target property.*

It should be noted that this section is only intended to represent a brief summary of our findings and is not a detailed account of all the information compiled in preparation of this report. ## 2.0 INTRODUCTION

---

### 2.1 Purpose

The purpose of this Phase I Environmental Site Assessment (Phase I ESA) is to identify, to the extent feasible pursuant to the processes prescribed in the ASTM, E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, *recognized environmental conditions* (RECs) in connection with the property. The term REC means “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment”. *De minimis* conditions are not recognized environmental conditions. *De minimis* conditions generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The Phase I ESA Process is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner*<sup>5</sup>, *contiguous property owner*<sup>6</sup>, or *bona fide prospective purchaser*<sup>7</sup> limitations on CERCLA liability (*landowner liability protections*).

### 2.2 Detailed Scope of Services

Spectrum employs a phased approach to site investigations by outlining and completing specific work tasks. A Phase I ESA usually consists of a records review, site

---

<sup>5</sup> Innocent Landowner Defense: A person may qualify as one of three types of innocent landowners: (i) a person who “did not know and had no reason to know” that contamination existed on the property at the time the purchaser acquired the property; (ii) a government entity which acquired the property by escheat, or through any other involuntary transfer or acquisition, or through the exercise of eminent domain authority by purchase or condemnation; and (iii) a person who “acquired the facility by inheritance or bequest.” To qualify for the innocent landowner defense, such person must have made all appropriate inquiries on or before the date of purchase. Furthermore, the all appropriate inquiries must not have resulted in knowledge of the contamination. If it does, then such person did “know” or “had reason to know” of contamination and would not be eligible for the innocent landowner defense.

<sup>6</sup> Contiguous Property Owner Liability Protection: A person may qualify for the contiguous property owner liability protection if, among other requirements, such person owns real property that is contiguous to, and that is or may be contaminated by hazardous substances from other real property that is not owned by that person. Furthermore, such person conducted All Appropriate Inquiry at the time of acquisition of the property and did not know or have reason to know that the property was, or could be, contaminated by a release or threatened release from the contiguous property. The all appropriate inquiries must not result in knowledge of contamination. If it does, then such person did “know” or “had reason to know” of contamination and would not be eligible for the contiguous property owner liability protection.

<sup>7</sup> Bona fide prospective purchaser liability protection: A person may qualify as a bona fide prospective purchaser if, among other requirements, such person made “all appropriate inquiries into the previous ownership and uses of the facility in accordance with generally accepted good commercial and customary standards and practices.” Knowledge of contamination resulting from all appropriate inquiry would not generally preclude this liability protection. A person must make all appropriate inquiry on or before the date of purchase and the facility must have been purchased after January 11, 2002.

reconnaissance, personal interviews, and the generation of a report. Results of the initial Phase I ESA help assess whether further investigations may be necessary.

*2.2.1 Records Review*

The purpose of the records review is to obtain and review records that will help identify RECs in connection with the property. Accuracy and completeness of record information varies among information sources, including governmental sources. Record information is often inaccurate or incomplete. The user or environmental professional is not obligated to identify mistakes or insufficiencies in information provided. However, the environmental professional reviewing records shall make a reasonable effort to compensate for mistakes or insufficiencies in the information reviewed that are obvious in light of other information of which the environmental professional has actual knowledge.

A listing of standard environmental record sources is listed below.

Other sources of information that could be reviewed include, but is not limited to, Alabama Department of Environmental Management (ADEM), the local Fire Department, Planning Department, Building Permits Department, aerial photographs, fire insurance maps, property tax files, recorded land title records, topographic maps, and city directories.

### *2.2.2 Site Reconnaissance*

The objective of the site reconnaissance was to obtain information indicating the likelihood of identifying RECs in connection with the property. A site reconnaissance was conducted by Spectrum personnel experienced in hazardous materials/petroleum product surveys. Surface conditions and current activities on the subject property and on adjoining properties were observed. An inventory of potential contaminant sources on, and adjoining, the subject property was completed on the basis of regulatory agency record reviews and visual observations. Limitations encountered during the site reconnaissance are included in the discussion of the report.

### *2.2.3 Interviews*

The objective of interviews was to obtain information indicating RECs in connection with the property. Interviews with past and present owner, operators, and/or occupants of the property, where possible, were conducted as part of this Phase I ESA. Other persons potentially interviewed could include State and local government officials, local fire department personnel, local historians, and others that may have specialized knowledge of the site and/or surrounding properties.

### *2.2.4 Evaluation and Report Preparation*

This Phase I ESA report summarizes the findings from the tasks described above. Spectrum has provided a discussion of potential and existing contamination sources, and conclusions regarding our evaluation of the likelihood of contamination on the target property.

## **2.3 Significant Assumptions**

No significant assumptions were made during the conduct of this Phase I ESA unless otherwise stated.

## **2.4 Limitations and Exceptions**

Spectrum has performed our services for this project in accordance with our agreement, ASTM Practice E 1527-13, and the site-specific requirements provided by client, where applicable. No guarantees are either expressed or implied.

The records search was limited to information available from public sources; this information is changing continually and is frequently incomplete. Unless we have actual knowledge to the contrary, all information obtained from interviews or provided to us has been assumed to be correct and complete. Spectrum assumes no liability for findings or conclusions we may draw based on misleading or false information provided to us. Further, we assume no liability for items, conditions, or situations not visible or readily accessible through the application of standard professional care and practice.

There is no investigation that is thorough enough to preclude the presence of materials on the subject property that presently, or in the future, may be considered hazardous. Because regulatory evaluation criteria are constantly changing, concentrations of contaminants present and considered to be acceptable may, in the future, become subject to different regulatory standards and require remediation. Spectrum assumes no liability for findings or conclusions we may draw based on misleading or false information provided to us. Further, we assume no liability for items, conditions, or situations not visible or readily accessible through the application of standard professional care and practice.

## **2.5 Special Terms and Conditions**

There are no special terms and/or conditions pertaining to this Phase I ESA.

## **2.6 User Reliance**

This report is certified to USS Real Estate. Any reliance on this report by other parties shall be at such party's sole risk.

**5.0 RECORDS REVIEW**

**5.1 Standard Environmental Record Sources**

Environmental Risk Information Services (ERIS) conducted a search of available environmental records. The report, dated September 24, 2021, was designed to assist parties seeking to meet the requirements of EPA’s Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risks associated with a parcel of real estate.

ERIS’s search of available (“reasonably ascertainable”) government records on the target property and within the search radius around the target property included the databases listed on Pages 4 through 7 of the Radius Search database report (Appendix C).

*5.1.1 Target Property*

The target property was not identified in any of the databases searched.

*5.1.2 Surrounding Properties*

Discussion of Groundwater Flow Direction - The position (with respect to the groundwater flow direction) of any site to the target property is essential in helping evaluate whether or not a site (or contamination associated with a site) represents a REC to the target property. Based on our review of site topography and surface water features, it appears that the groundwater flow direction in the area would be generally to the west towards Opossum Creek.

For the purpose of the following discussion, only those sites in close proximity, and in an apparent crossgradient/upgradient position relative to the target property will be evaluated. A discussion of the surrounding sites is provided in the table below:

Based on the results from sampling, BTEX constituents were detected within two of the groundwater samples collected; however, benzene, ethylbenzene, and toluene concentrations were detected below 0.500 µg/l and the concentration of total xylenes was detected below 1 µg/l in the samples collected from the monitoring well closest to the target property. Due to file size, this report may be provided upon request. <i>Based on this information, this site is not interpreted to represent a REC in connection with the target property.</i></p>

The site is located in an interpreted crossgradient position relative to the parcels. The site is listed in the SPILLS database due to a reported spill of 100 gallons of diesel fuel in October 1995. The incident was reportedly closed later in the month. The site is also listed in the UST database for having one 10,000-gallon gasoline/diesel (multi compartment) UST and one 10,000-gallon gasoline UST. The tanks were installed in 2008 and are currently in use. Based on a review of compliance documents obtained from ADEM's eFile website, the USTs passed the annual inspection and associated tests in March 2020. <i>Based on this information, specifically the crossgradient position and UST compliance status, this site is not interpreted to represent a REC in connection with the target property.</i></p>

The site is listed in the SPILLS database due to a reported spill of 80 gallons of diesel fuel in February 2006. The incident was reportedly closed in September 2007. <i>Based on this information, specifically the crossgradient position, this site is not interpreted to represent a REC in connection with the target property.</i></p>

<p>This site is located approximately 0.08 miles north of PA-3 and is in an interpreted crossgradient to upgradient position relative to the parcel. The site is listed in the Aboveground Storage Tank (AST) database for having one 275-gallon diesel AST. The tank was installed in 1995 and is currently in use. The site is also listed in the UST database; however, this listing appears to be associated with the AST and there are no USTs listed at the site. Further, the site is listed in the RCRA database as a Small Quantity Generator of hazardous waste. The facility received several violations in 2006, but returned to compliance the same year. <i>Based on this information, specifically the crossgradient position and RCRA compliance status, this site is not interpreted to represent a REC in connection with the target property.</i></p>				

### 5.1.3 Orphan Sites

Five Orphan sites were identified in the database report. After further review, it appears that one site is located in an interpreted downgradient position, two sites are located in distant crossgradient positions, and one site is located over a mile from the target property.

The fifth site (unnamed site of Valley Road) is listed in the Hazardous Materials Information Reporting System (HMIRS) due to a reported release of 0.5 gallons of Nalco 8325 in June 1994. *Based on the amount released, this site is not interpreted to represent a REC in connection with the target property.*

## 5.2 Additional Environmental Record Sources

A previous Phase I ESA was conducted at that target property (PA-4) by Highland Technical Service, Inc (HTSI), dated December 7, 2007. At the time of the assessment, the property included three multi-family residential buildings. HTSI did not identify any RECs in connection with the target property.

## **7.0 INTERVIEWS**

---

### **Property Owner Representative – Peter Allsopp**

Spectrum interviewed Mr. Peter Allsopp, a representative of the property owner, over the phone on October 1, 2021. Mr. Allsopp stated that he has been associated with the property and US Steel for approximately 24 years. US Steel has owned all the parcels other than PA-4 for over a century. He stated that PA-4 was previously developed for use as an apartment complex and that all other properties have been undeveloped. Mr. Allsopp stated that US Steel bought and demolished the buildings at PA-4 in 2008. Additionally, Mr. Allsopp informed Spectrum that the property is supplied sanitary sewer connection. Mr. Allsopp stated that he is not aware of any buried drums, USTs, or ASTs on the target property. Further, Mr. Allsopp stated that he is unaware of any environmental incidents involving petroleum products or hazardous materials at the target property.

### **Fairfield Fire Department**

Spectrum left a message with the Fairfield Fire Department on October 1, 2021 to determine if there have been any fires or responses at the target property; however, a response has not been received at this time.

## **8.0 VAPOR ENCROACHMENT SCREENING**

---

### **8.1 Introduction**

Spectrum conducted a vapor encroachment screen (VES) in accordance with ASTM E2600-10: Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions as part of this Phase I ESA to identify a Vapor Encroachment Condition<sup>8</sup> (VEC) associated with the target property. Factors considered by Spectrum's Environmental Professional included the following:

- Use of Target Property
- Types of Chemicals of Concern (COCs)
- Location(s) of Known/Suspected Contamination
- Soil Characteristics
- Depth to Groundwater
- Vapor Conduits
- Cleanup Status of Contaminated Property(s)

### **8.2 Discussion**

As part of the VES evaluation, Spectrum considered the above factors in addition to the anticipated groundwater flow direction and barriers/conduits affecting groundwater flow, if any. The position (with respect to the groundwater flow direction) of any site to the target property is essential in helping evaluate whether or not a site (or contamination associated with a site) represents a VEC to the target property.

Based on our review of site topography and surface water drainage features, it appears that the groundwater flow direction in the vicinity of the target property would be to the west towards Opossum Creek.

---

<sup>8</sup> Vapor Encroachment Condition (VEC) — the presence or likely presence of COC vapors in the sub-surface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater either on or near the TP.

### **8.3 Findings**

Based on a review of historical data, the target property has been predominately undeveloped since at least 1940, with the exception of PA-4. From at least 1950 until approximately 2006, PA-4 was developed for multi-family residential use. Currently, there are no buildings on the target property. During the site reconnaissance, no petroleum products or hazardous materials were observed on the target property. Further, the target property was not identified in any of the environmental databases searched.

Multiple sites were identified in the environmental database report within the search distance set forth in ASTM E2600-10 (up to 0.33 miles from the target property). A review of information in the database report (see Section 5.1.2) did not identify any sites with known releases or spills that would likely affect the target property. *Based on our review of this data, a VEC to the target property is unlikely.*

## **9.0 FINDINGS**

---

Spectrum has conducted a review of readily available and reasonably ascertainable records for the site, conducted a site reconnaissance along with interviews with persons knowledgeable of the site and surrounding properties, and evaluated the data during the preparation of this report. Based on our evaluation of the data, Spectrum presents the following findings:

- *Vapor Encroachment Conditions*
- *Current and historical use of target property; and*
- *Current and historical use of adjacent properties.*

## 10.0 OPINION

---

Based on the information obtained during the site reconnaissance, records reviews, and interviews, Spectrum has evaluated current and historical information pertaining to the target and surrounding properties. Based on these evaluations, opinions regarding conditions observed and the classification of these conditions is presented below. For each condition, Spectrum has classified each as a REC, a historical REC<sup>9</sup>, a Controlled REC<sup>10</sup>, or a BER and presents an opinion why the condition is classified as such.

### 10.1 Vapor Encroachment Condition

The target property is currently undergoing development for commercial use. Prior to this, the property was undeveloped, forested land.

Based on a review of historical data, the target property has been predominately undeveloped since at least 1940, with the exception of PA-4. From at least 1950 until approximately 2006, PA-4 was developed for multi-family residential use. Currently, there are no buildings on the target property. During the site reconnaissance, no petroleum products or hazardous materials were observed on the target property. Further, the target property was not identified in any of the environmental databases searched.

Multiple sites were identified in the environmental database report within the search distance set forth in ASTM E2600-10 (up to 0.33 miles from the target property). A review of information in the database report (see Section 5.1.2) did not identify any sites with

<sup>9</sup> *Historical Recognized Environmental Condition*—A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.

<sup>10</sup> *Controlled Recognized Environmental Condition*—A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

known releases or spills that would likely affect the target property. *Based on our review of this data, a VEC to the target property is unlikely.*

## **10.2 Current and Historical Use of Target Property**

Based on a review of historical data, the target property has been predominately undeveloped since at least 1940, with the exception of PA-4. From at least 1950 until approximately 2006, PA-4 was developed for multi-family residential use. Currently, there are no buildings on the target property.

The target property was not listed in any of the databases searched by ERIS. During the site reconnaissance, Spectrum identified no storage of hazardous materials or petroleum products on the target property.

*Based on this information, the current and historical use of the target property, the past and current site operations are not interpreted to represent a recognized environmental condition to the target property.*

## **10.3 Current and Historical Use of Adjacent Property**

Based on our review of the environmental database report, adjoining properties were predominately undeveloped or developed for residential use from at least the late 1920s until the early 1950s. By this time, an adjoining property to the south of PA-1 was developed for commercial use. By the late 1960s, surrounding properties to the west of PA-3 were developed for commercial use, an adjoining property to the north of PA-4 and PA-5 was developed for commercial use, and several residential buildings to the west of PA-2 were demolished. By the early 1990s, adjoining properties to the west and south of PA-4 and PA-5 were developed for commercial use, remaining residential buildings to the west of PA-2 were demolished and new residential or commercial buildings were developed. By the late 1990s, adjoining properties to the east of PA-6 and PA-3 were developed for commercial use. By approximately 2006, an adjoining property to the south of PA-3 was developed for commercial use and the adjoining property to the north of PA-4 and PA-5 was demolished.

The ERIS database report identified multiple sites and based on the discussion and opinions presented in Section 5.1.2, did not identify the potential of a release from any adjoining properties that could have affected the target property. *Based on our review of the environmental database report, a reconnaissance of the surrounding properties, and our review of surface water drainage patterns, no adjoining properties were interpreted to represent a REC to the target property.*

## 11.0 CONCLUSION

---

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 for the target property. Any exceptions to, or deletions from, this practice are described in Section 12.0 – Deviations of this report. Based on our review of current and historical site data, the following conclusions are presented.

### ***Recognized Environmental Conditions***

A recognized environmental condition (REC), as defined in the ASTM Standard, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not REC's. *Based on our review of current and historical site data, no RECs were identified in connection with the target property.*

### ***Historical Recognized Environmental Conditions***

A historical recognized environmental condition (HREC), as defined in the ASTM Standard, is an environmental condition that in the past would have been identified as a REC, but has been adequately addressed and therefore no longer represents a REC. *Based on our review of current and historical site data, no HRECs were identified in connection with the target property.*

### ***Controlled Recognized Environmental Conditions***

A controlled recognized environmental condition (CREC), as defined in the ASTM Standard, is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations,

institutional controls, or engineering controls). *Based on our review of current and historical site data, no CRECs were identified in connection with the target property.*

***Business Environmental Risks***

A business environmental risk (BER), as defined in the ASTM Standard, is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. *Based on our review of current and historical site data along with information collected during the site reconnaissance, no BERs were identified in connection with the target property.*

## **12.0 DEVIATIONS**

---

Historical information regarding the subject site has been obtained through the use of historical topographic maps, aerial photographs and interviews with individuals cognizant of the site. The earliest view of the property that was readily available and reviewed was a 1928 Fire Insurance Map. The data gaps in the historical review were not during times of significant change on the target property. As such, it is not believed that this lack of readily available or reasonable ascertainable data represents a significant data gap that would lead to the identification of additional RECs or BERs on the target property.

<b>Description of Events:</b>						

As the driver was initiating the unloading process he noticed the pump discharge valve (V-7) was frozen up and would not rotate. The customer operator assisting in the unloading process brought a steam hose and cracked open the steam valve at the utility station while the driver thawed the valve by applying steam to the stem/packing gland area. After about a minute of applying heat the valve handle rotated freely by hand but was left in the closed position as the driver proceeded with the unloading procedure. After engaging the clutch to start the pump he began the process of opening the discharge valve while closing the recirculation valve to build pressure. The pump

discharge pressure initially climbed to 140-150 psig which is higher than the 125 psig target so he turned the discharge valve handle again to ensure it was fully open as he also began adjusting the VW throttle. At that point the V-7 valve blew apart causing LOX to spray into the trailer cabinet. The driver ran around the side of the trailer and shut down the VW motor. He then went to the other side of the trailer to trip the emergency shutoff valve but when he pulled the t-handle the valve would not trip so he returned to cabinet to shut off the pump inlet valve. After closing that valve the LOX flow ceased. He then opened the manual vent to lower pressure on the trailer. He secured the trailer for return trip to facility.

**Recommend Actions Taken:**

Torque procedures for valve bonnet nut have been reviewed and communicated. We have improved routing for actuation cable and ensured emergency valve operates reliably. Review emergency response and will incorporate lessons learned into driver training. We also communicated to all other sites with a safety flash explaining the incident hazards to watch for and corrective actions.

Description of Events:	The driver reported that he was using air pressure and 60ft of hose to unload from cargo tank into customer storage tank. When the storage tank was almost full he closed the discharge valve and then opened it just one turn to reduce flow. Within 2 seconds of the hose going empty he closed the valve. At that time the customer's PVC fill line where the our hose was connected failed. Hose came off and sprayed some product. The driver estimated 5 gallons but that is probably over estimated. No injuries to anyone. Customer cleaned up.					
Recommend Actions Taken:	The fill line had recently been replaced and this was just the second time it was used. Customer will take that into account to see if any changes need to be made when it is replaced.

**Description of Events:** As the driver was initiating the unloading process, he noticed the pump discharge valve (V-7) was frozen up and would not rotate. The customer operator assisting in the unloading process brought a steam hose and cracked open the steam valve at the utility station while the driver thawed the valve by applying steam to the stem/packing gland area. After about a minute of applying heat, the valve handle rotated freely by hand, but was left in the closed position as the driver proceeded with the unloading procedure. After engaging the clutch to start the pump, he began the process of opening the discharge valve while closing the recirculation valve to build pressure. The pump discharge pressure initially climbed to 140-150 psig which is higher than the 125 psig target, so he turned the discharge valve handle again to ensure it was fully open, as he also began adjusting the VW throttle. At that point, the V-7 valve blew apart causing LOX to spray into the trailer cabinet. The driver ran around the side of the trailer and shut down the VW motor. He then went to the other side of the trailer to trip the emergency shutoff valve, but

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

when he pulled the t-handle the valve would not trip, so he returned to cabinet to shut off the pump inlet valve. After closing that valve the LOX flow ceased. He then opened the manual vent to lower pressure on the trailer. He secured the trailer for return trip to facility.

**Recommend Actions Taken:**

Torque procedures for valve bonnet nut have been reviewed and communicated. We have improved routing for actuation cable and ensured emergency valve operates reliably. Review emergency response and will incorporate lessons learned into driver training. We also communicated to all other sites with a safety flash explaining the incident, hazards to watch for, and corrective actions.

<b>Description of Events:</b>	The driver reported that he was using air pressure and 60ft of hose to unload from cargo tank into customer storage tank. When the storage tank was almost full, he closed the discharge valve and then opened it just one turn to reduce flow. Within 2 seconds of the hose going empty, he closed the valve. At that time, the customer's PVC fill line where the our hose was connected, failed. Hose came off and sprayed some product. The driver estimated 5 gallons but that is probably over estimated. No injuries to anyone. Customer cleaned up.					
<b>Recommend Actions Taken:</b>	The fill line had recently been replaced and this was just the second time it was used. Customer will take that into account to see if any changes need to be made when it is replaced.

# Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:*

*"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."*

#### Formerly Utilized Sites Remedial Action Program:

DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

**Government Publication Date: Mar 4, 2017**

#### National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

**Government Publication Date: Aug 25, 2021**

#### National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

**Government Publication Date: Aug 25, 2021**

#### Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

**Government Publication Date: Aug 25, 2021**

#### SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

**Government Publication Date: Jul 29, 2021**

#### Inventory of Open Dumps, June 1985:

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

**Government Publication Date: Jun 1985**

**SEMS List 8R Archive Sites:**

[SEMS ARCHIVE](#)

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

**Government Publication Date: Jul 29, 2021**

**Comprehensive Environmental Response, Compensation and Liability Information System -**

[CERCLIS](#)

**CERCLIS:**

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

**Government Publication Date: Oct 25, 2013**

**EPA Report on the Status of Open Dumps on Indian Lands:**

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

**Government Publication Date: Dec 31, 1998**

**CERCLIS - No Further Remedial Action Planned:**

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

### Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

## Federal Sources

### FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

### Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

### Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

### Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

### Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

### Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

### U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

### USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

### USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

### USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.
